## **Instructions for care and use of temporary crowns**

**Do not eat chewy or sticky foods** like gum or caramels.

You may chew hard foods.

Brush the area with your normal routine.

If dental floss is to be used, remove the floss by pulling it horizontally from between the teeth. **Do not remove floss by pulling it back through the contact with the adjacent tooth.**

If the temporary crown or bridge becomes dislodged, call the office and arrange for a re-cementation. You may place it back on the tooth by placing one drop of any cooking oil in the crown and pushing it back onto the tooth. **While this will work for a short time, you must return to the office for re-cementation.**
